

Infodraw Ltd. Privacy Policy for MRS Android Monitor Client Application

MRS Android client stores on the mobile device the connection parameters, including the MRS server address, user name and password. It uses this information to reconnect to the server every time the application is restarted. The application also stores the latest video channel to have the view restored. This information is not transferred to any party aside from the relevant MRS server.

MRS Android client captures audio from the mobile device upon user request to be heard through a speaker or microphone connected to an MRS device. This media is only transferred to the MRS Server and from this server to the MRS device.
